THERE IS NO ENERGY SHORTAGE

Unlocking the Potential of Our Built Environment

Energy Efficiency and Energy Optimization

TAPPING INTO CURRENT ENERGY RESOURCES:

- **Did You Know?**

California alone has over 1.6 million commercial buildings, with approximately 80,000 buildings over 50,000 square feet. These structures represent a vast untapped resource for energy optimization, not to mention the other 49 U.S. states, all of the U.S. Territories, and millions more square feet worldwide.

- **The Hidden Waste:**

A significant portion of energy in these buildings is wasted every day due to inefficiencies, outdated systems, and outdated energy management. This wasted energy alone equals more than enough power to run millions of homes and businesses, not to mention 100's of hyperscale AI data centers, and more.

- **U.S. Environmental Protection Agency (EPA)**

This daily waste results in over 35 million tonnes of CO emissions pouring into the atmosphere, equal to the annual emissions of millions of homes.

THE SOLUTION – TUNE-UP AND OPTIMIZE:

- **What Can Be Done?**

By **improving operational efficiency and upgrading systems** buildings can reduce energy consumption by as much as 20-50% (and potentially even more).

⚡ Step 1: **Implement the smart AI energy management system.**

⚡ Step 2: **Upgrade to energy-efficient HVAC systems, lighting, etc.**

- **Case Study:**

The California Model Shows that Optimizing just **5% of the largest buildings** could:

⚡ **Save billions of kilowatt-hours annually in less time and for much less.**

⚡ **Achieve up to 25% of current energy goals, or more, with fewer downsides.**

BENEFITS BEYOND ENERGY SAVINGS:

Environmental Impact:

Reducing waste contributes to the nation's clean energy and emissions reduction goals.

Economic Advantages:

Lower utility bills and increased property value for commercial and residential owners.

Job Creation:

Thousands of jobs created in energy retrofitting, system upgrades, and monitoring.

CALL TO ACTION:

Join the Energy Revolution.

Together, we can harness the hidden power of our buildings to eliminate waste and power the future.
